Cosmetic Skin Disfurbances and Consusing Cases

Kiyoshi TODA*

Observations were made at the cosmetic skin diseases clinic of the Department of Dermatology, Tokyo Teishin Hospital for these two years.

Many cases which visited our clinic with complaint of cosmetic skin troubles were not cosmetic skin diseases. Some cases among the cases which were diagnosed as cosmetic skin disorders, however, were also not cosmetic skin diseases. Common diseases among those were herpes simplex, lupus erythematosus, solar dermatitis, drug eruption and contact dermatitis not due to cosmetics.

Only accurate diagnosis depending on accurate observation and history of the lesion and proper testing methods, can prevent this kind of confussions.
