Biological Evaluation on Systemic and Local Effects of Topical Corticosteroids following Percutaneous Absorption.

Katsuyuki TAKEDA, Tetsuji ASATO,

Masashi NOMOTO and Seiichi AIH

Recent advances in the biological evaluation method on systemic and local effects of topical corticosteroids are reviewed herein. In the views of above systemic and local effects observed on any topical corticosteroids at clinical concentrations, although given in considerable amounts, careful attention has to be paid to clinical use of topical corticosteroids in a large dose for a longer period.

Further work is in progress to increase the accuracy of the instrument and the procedure so that the method may eventually be suitable for routine screening of the new topical corticosteroids.
