#### **Abstract**

Thirty-one patients with nevus of Ota (male: 1, female: 30) who have been treated at the Mizumachi clinic from 1993 to 1995 responded to a questionnaire concerning the degree of satisfaction with the treatment, its cost and emotional effects. Seventy-two percent of the patients were satisfied with the present laser treatment and its costs. Ninety-four percent of the patients felt a decrease in the psychological stress after the treatment. It is confirmed that the laser treatment for nevus of Ota is effective for decreasing the psychological stress and also for lightning nevus of Ota.

**Key words:** nevus of Ota, inquires for consciousness, laser treatment, Q-switched alexandrite laser.
