## 毛器官の構造と機能

伊藤雅章

### **Structure and Function of Hair Apparatus**

Masaaki ITO

#### **Abstract**

On the occasion of a president lecture of the 37th annual meeting of the Japanese Cosmetic Science Society, I referred the hairs organ study that our dermatology department had conducted with me so far and explained a viewpoint and a way of thinking about the structure and function of the hairs organ. The hair is an important study theme of cosmetic science, but is a very difficult organ in medical science-like understanding. I hope that this lecture will help the future hair studies by the society members.

**Key words:** hair apparatus, hair anomalies, electron microscope, molecular biology.
